Cybervast Group Assignment 1

Team A6

List 10 cybersecurity risks you observe in your daily environment.

2. For each risk, categorize it under a common cyberattack type (e.g., phishing, malware, social engineering).

3. Suggest a simple solution for each risk.

4 Write a report of the identified risks, attack types, and mitigation strategies.

Submission

Question 1

i. **Lack of Awareness About Cybersecurity**

A trader in a popular Market in Nigeria receives a text from "her bank" requesting her ATM PIN to prevent account deactivation. Without verifying, she shares the details and lost her life savings to a scammer.

ii. **Phishing Attacks**

My Friend received a message claiming he won ₦100,000 in a raffle by a popular brand. He was directed to click a link and enter his banking details to claim the prize; fortunately for him, unfortunately for the attacker, he's beside me, and I understand how phishing link works.

iii. **Weak Passwords:**

A university student in Lagos, using "Ayomide123" as a password, uses this password for his school portal and still says in public that

he can never forget his password because he uses only one password. A hacker easily guesses it and gains access to all his social media accounts.

iv. Fake Profiles and Impersonation

A scammer creates a fake profile of a known Nigeria-based influencer and asks their followers for donations to support a "charity event." Many unsuspecting people send money.

v. Unsecured Wi-Fi Connections

A customer at a popular café in Ayobo Lagos state connects to free public Wi-Fi without a password. An attacker intercepts his online banking credentials.

vi. Downloading Unauthorized Apps

A lady downloads a pirated version of a gaming app from an unofficial website. The app secretly collects her personal and financial data; now, she is in debt because of the contributions of other people in her account.

vii. Social Engineering Tactics

A scammer sent me a message pretending to be my cousin in distress, requesting an urgent mobile money transfer for a “hospital bill.” I discovered it was fake immediately because am aware of these tactics

viii. Clicking on Malicious Links

My coworker clicks on a link shared in a Facebook group promising “free MTN airtime.” The link downloads malware that collects her phone data, and the rest is a touching story.

ix. Sharing Personal Information Publicly

A business owner posts her phone number, BVN, and bank details in a public WhatsApp group to confirm payment for an order. Scammers later use this information for fraud.

x. **Inadequate Privacy Settings**

My neighbor leaves his Facebook profile public. Scammers access his photos, create a fake profile, and scam his friends and family.

Question2

s/n	RISK	CYBERATTACK TYPE
1.	Lack of Awareness About Cybersecurity	Phishing and Social Engineering
2.	Phishing Attacks	Phishing
3.	Weak Passwords	Credential Stuffing
4.	Fake Profiles and Impersonation	Social Engineering
5.	Unsecured Wi-Fi Connections	Man-in-the-Middle (MitM) Attack
6.	Downloading Unauthorized Apps	Trojan Malware
7.	Social Engineering Tactics	Social Engineering
8.	Clicking on Malicious Links	Malware Distribution
9.	Sharing Personal Information Publicly	Identity Theft
10.	Inadequate Privacy Settings	Identity Theft

Question 3

s/n	RISK	Simple Solution
1	Lack of Awareness About Cybersecurity	Participate in basic cybersecurity training or awareness campaigns. Follow trusted cybersecurity blogs or resources to stay informed about potential threats
2	Phishing Attacks	Always verify the authenticity of messages and links before clicking. Avoid sharing sensitive information through unverified emails or social media
3	Weak Passwords	Use strong, unique passwords with a mix of letters, numbers, and special characters. Enable multi-factor authentication (MFA) for added security
4	Fake Profiles and Impersonation	Always verify accounts claiming to represent known individuals or organizations. Report and block fake profiles immediately
5	Unsecured Wi-Fi Connections	Avoid using public Wi-Fi for sensitive activities like online banking. Use a Virtual Private Network (VPN) to encrypt your connection if public Wi-Fi is unavoidable
6	Downloading Unauthorized Apps	Only download apps from official app stores like Google Play or Apple App Store. Check app reviews and permissions before installation
7	Social Engineering Tactics	Be cautious of unsolicited requests for money or information. Verify the identity of the requester

		through another trusted source before acting
8	Clicking on Malicious Links	Avoid clicking on links from unknown sources. Use an antivirus tool that can block malicious websites and regularly scan your device
9	Sharing Personal Information Publicly	Avoid posting personal details like BVN, phone numbers, or financial information on public platforms. Share sensitive details only through secure, private channels
10	Inadequate Privacy Settings	Adjust social media privacy settings to limit access to your posts and personal information. Only share sensitive content with trusted contacts

Question 4

As social media usage continues to rise in Nigeria so does the exposure to cybersecurity risks. This report (**Solution 1**) highlights ten prevalent risks observed in daily environments (**Solution 2)** categorize them under common cyberattack types, and (**Solution 3**) outlines practical mitigation strategies to enhance user safety.

This report highlights the importance of cybersecurity awareness in reducing risks associated with social media usage in Ibadan, Oyo State. While the identified risks are prevalent, the outlined mitigation strategies provide practical solutions for users to protect themselves. A concerted effort to educate the public about these threats is essential to enhance digital safety.
