CYBERVAST BOOTCAMP WEEK 3 ASSIGNMENT

Group A6

QUESTIONS

1. This Assignment is currently encoded in base 64, decode it and give the questions in plaintext
2. Create a table listing 10 passwords, their strength rating (Weak, moderate or Strong), and justification for each rating.
3. Set up 2FA on a personal account (e.g., email, social media) using an app like Google Authenticator or SMS. Provide a screenshot of the setup confirmation and a short write-up on why 2FA enhances security.

QUESTION 2

S/N	PASSWORD	STRENGTH	JUSTIFICATION
1.	Jesusislord	Weak	Contains only letter, it is a known word, does not have any number or special character and it is not up to 12 characters.

2.	Myname123	Weak	It contains upper and lower case, number included but does not include special character, it is a known word and not up to 12 characters.
3.	PwKgh@167#&G2reM	Strong	It contains lower and upper case, number, special characters, not a known word and it more than 12 characters.
4.	08032455248	Weak	It contains only numbers, no lower or upper case, no special character and it is no up to 12 characters.
5.	emmanuel@123	Moderate	It contain lower case number, special characters, it is a known word and it is more than 12 characters.

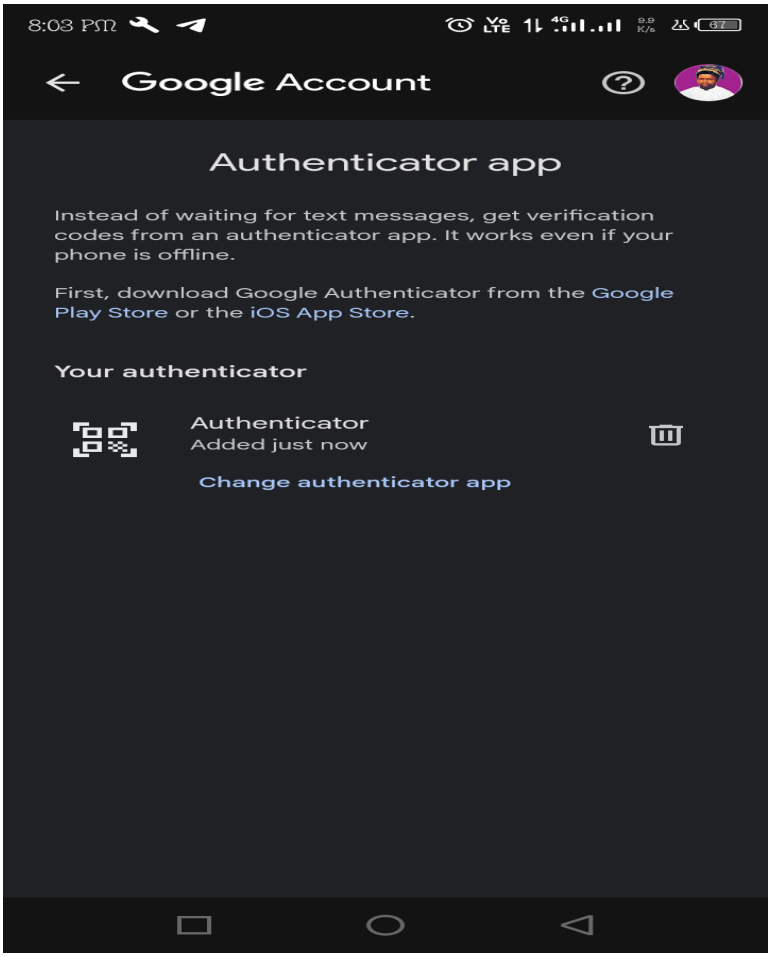
9.	hannah@1998#	Moderate	It contains only lower case, numbers,special character and it is more than 12 characters but it is a known word and no upper case is included.
10.	Aqe3Rs&#34€RY	Strong	It contains lower and upper case, number, special characters, not a known word and it more than 12 characters.

QUESTION 3



Two factor authentication (2FA) enhances security because it provide an extra layer of protection to prevent unauthorized access to data. It is necessary to use 2FA because a lot of unauthorized users (cybercriminals) are employing a lot of way to have access to our data therefore, 2FA is needed as a form of extra security.
